NEWSLETTER JUNE 1, 2018

Our Mission

Sure Growth Technologies Inc. is a group of professional consultants dedicated to helping growers utilize scarce resources. We strive to simplify, implement and support sustainable and profitable strategic growth of our progressive Ag partners.

Our Vision

We put our Client needs & goals first to provide tailored precision strategies built on sound agronomy and innovative technologies supported by a passionate network of knowledgeable people. Our goal is to be the most valuable input on your farm.

Current Updates!

Its that time of year again! Everyone is rolling, the crop is getting in the ground and in many places, coming out of the ground. Have you been out to scout yet? The Sure Growth team has been busy keeping an eye on things in the field. A bit of timely moisture has got the ball rolling for germination and emergence of seeded acres. It is important to keep in mind some early season threats, such as Flea Beetles in Canola, and to begin monitoring your crop right after emergence while it is vulnerable to threats & to make in-crop spray decisions based on crop monitoring & scouting. It is also important to keep an eye on how your plant is responding to the weather and fertility application. Are there any nutrient deficiency signs yet? Is your crop showing some signs of moisture stress? What you find when you scout should directly influence your in-crop decisions.

SAVE

Sure Growth is having our Annual Field Tour Day on July 27th 2018!

Contact Courtney at 306-229-3616 or courtney.tuck@outlook.com for more information and to RSVP! Can wait to see you there!

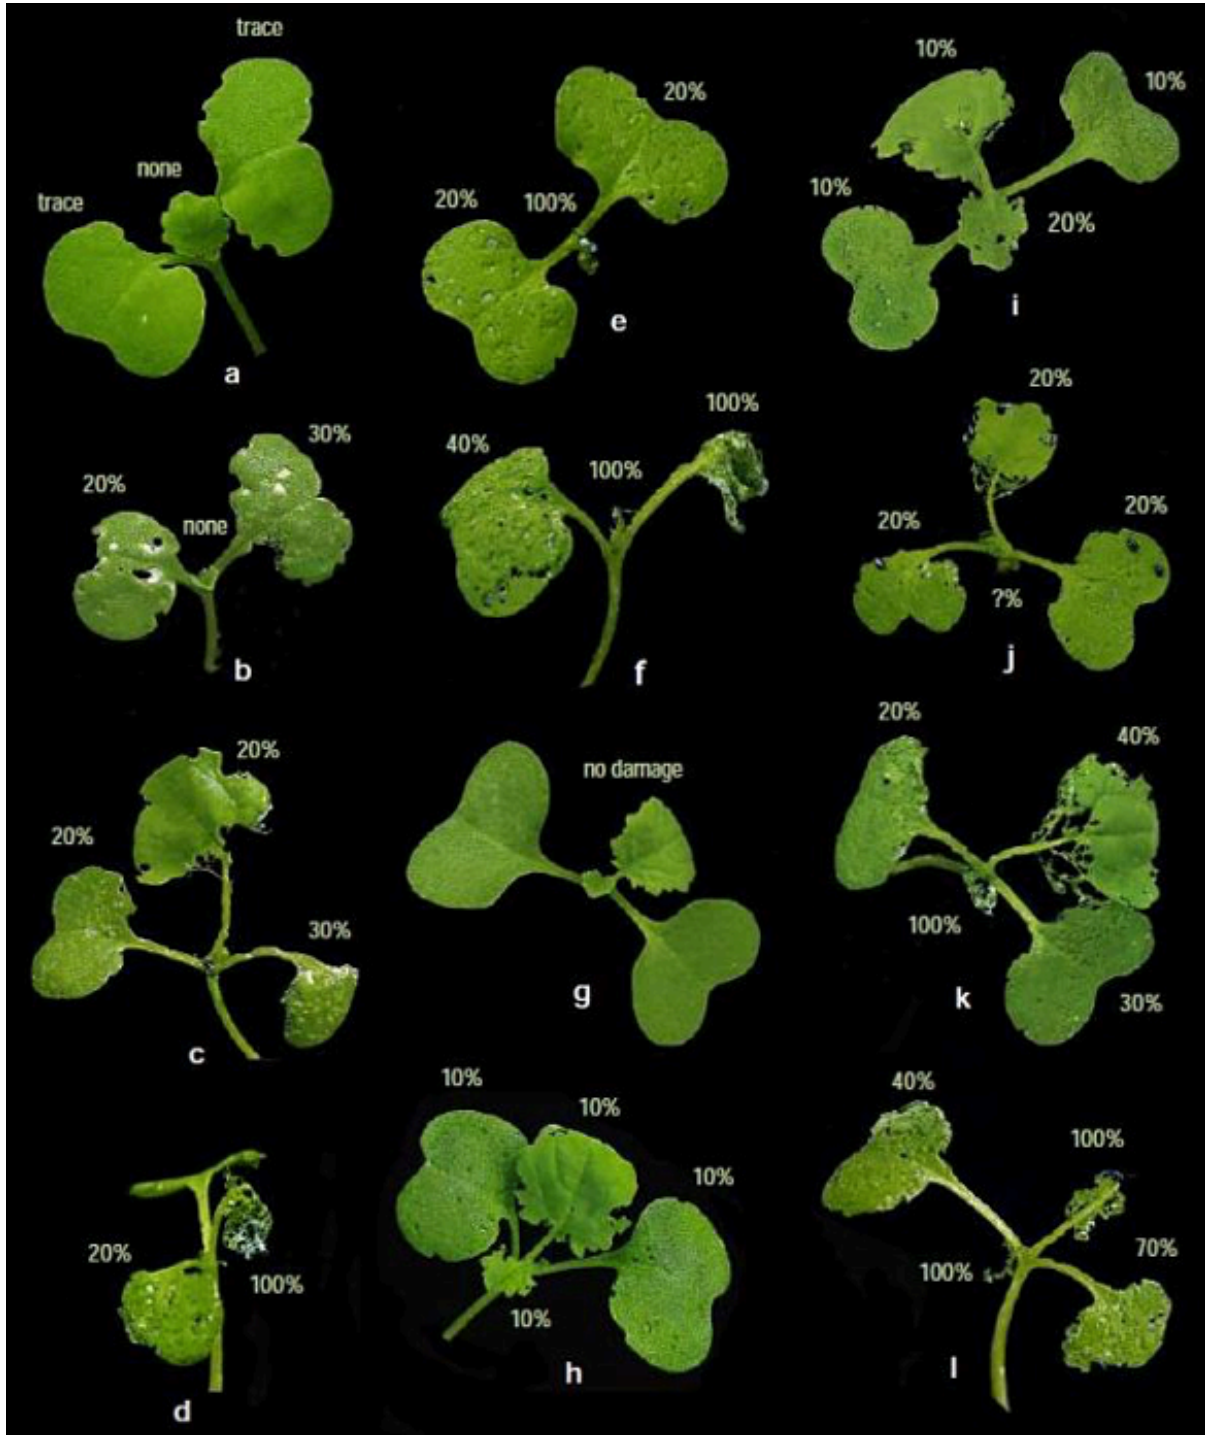

What We Are Doing!

The Sure Growth team is hard at work making sure everything is in place for our clients this spring. Justin and Courtney are out and about, scouting some fields to ensure the crop is coming out of the ground and is not at risk for any of our early

season threats.

Protecting your investment in the ground is more important than ever, especially when plants are young and most vulnerable to threats. Get in touch with Justin and Courtney about how they can help protect your crop through our Crop Management Programs for #Scout18.

2018 Scouting

Be on the lookout for Flea Beetle damage, feeding on leaf tissues but also feeding on stems. Flea Beetles are out and about and it will be important to monitor your crops for any damage in your canola. Direct losses from Flea Beetles in oilseed production average 8-10% of the annual crop year. It is important to additionally keep in mind that Flea Beetle movement and feeding are greatest during periods of warm, sunny, dry, calm weather. Death of damaged canola tissues can also be rapid warm, dry, windy weather. The economic threshold for Flea Beetles in canola crops in Canada is an average defoliation of 25% or more to the seedling leaf area.

As we have been experiencing a warm and dry spring, it is critical to monitor any crops that are emerging and scouting for any pest damage, including Flea Beetles in Canola. Estimating Flea Beetle damage can be challenging, however, there are resources available to you, such as the image above, published by Canola Watch.

Get in touch with us at Sure Growth as our team has put some new scouting packages for the 2018 season!

Trimble Ag Software Update

Trimble Ag Software provides "Farm Data Solutions That Help Grow Your Bottom Line".

Get your farm software working for you, not the other way around. Join us for a free live tour of Trimble Ag Software to help manage critical farm data during and after planting season.

The Webinar will run on June 14th from 10-11 AM (MT Time) and on June 28th from 3-4 PM (MT Time). Click below to register for the Webinar and learn about how to leverage Premium Weather to incorporate field weather trends, track farm labor and time costs, and keep track of your commodities through Trimble Ag Software.
