NEWSLETTER MAY 1st, 2018

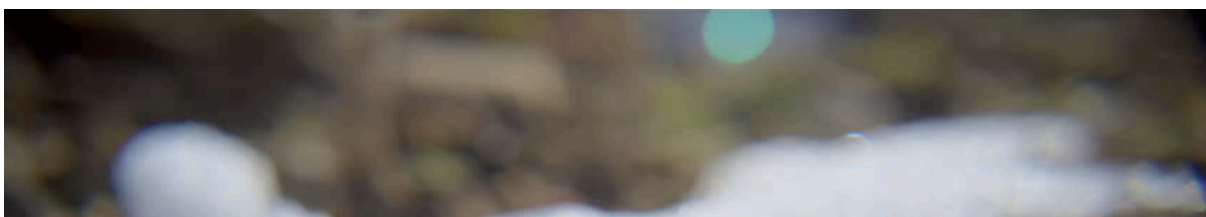

We have updated our Mission and Vision for Sure Growth! Read our update below!

Our Mission

Sure Growth Technologies Inc. is a group of professional consultants dedicated to helping growers utilize scarce resources. We strive to simplify, implement and support sustainable and profitable strategic growth of our progressive Ag partners.

Our Vision

We put our Client needs & goals first to provide tailored precision strategies built on sound agronomy and innovative technologies supported by a passionate network of knowledgeable people. Our goal is to be the most valuable input on your farm.

Current Updates!

The Saskatchewan Research Council in Saskatoon released some information earlier this spring of which we are all feeling the effects. First, the month of March was cold. Second, the first two weeks of April weren't much better, having daily average temperatures below the 2010-1981 average. It is pretty obvious, winter hung on as long as it could across western Canada, but the warm weather hit us, and the majority of the snow cleared up.

#Plant18 came around the corner very quickly, and it will be important for everyone to focus their new couple days getting the equipment ready, and their next couple weeks getting the crop in the ground.

Everyone stay safe this #Plant18 and we hope that operations run smoothly for you all this spring!

What We Are Doing!

The Sure Growth team is hard at work making sure everything is in place for our clients this spring. Justin and Courtney are out and about, ensuring crop plans are done and Justin is getting prescriptions delivered and loaded into the equipment. The team is very eager and excited for spring to be here and to get our guys rolling for the season!

2018 Scouting

What is the value of your crop per acre? What are your target yields and how will you ensure you have the best opportunity to achieve your yield targets and 2018 goals? Once the crop is in the ground it is essential to protect your investment! There are many factors, such as weed, diseases, and insects, that attempt to invade your crop throughout the season. These factors can have a negative impact and rob you of yield and result in you falling short of your 2018 goals. Scouting throughout the season can help us mitigate the risk of in-season threats. In-season field scouting can help you determine where and when attention and additional inputs may be warranted on the farm

warranted on the farm.

It is also important to measure your crops performance throughout the season. Monitoring crops throughout the season can help determine the potential effectiveness and value of your crop inputs. Maximize your crop and input efficiency by knowing what is going on in your fields throughout 2018.

Get in touch with us at Sure Growth as our team has put some new scouting packages for the 2018 season!

Am Z EW	0.002 gal/ac	- 651.2 gal	- \$ 1.33
Dry Chem	0.02 lb/ac	- 1800 lb	- \$ 1000

Trimble Ag Software Update

Switching from Agri-Data to Trimble Ag Software!

Tried and True, Agri-Data has been great for managing our businesses, however, moving forward, the Trimble Support Team is no longer adding new functionality &

features to Agri-Data. To get access to tools such as Crop Health Imagery and Work Orders you have to make the switch to Trimble Ag Software.

The new software has all of the same functions and data that Agri-Data had, however, they have added more tools and changed the look in Trimble Ag Software. While learning to navigate the new website you may hit a couple bumps in the road, but get in touch with Courtney as she would be more than happy to help you learn your way around the new website and to help you learn some of the new tools they have added!

Click below to go to Trimble's website to learn more about Crop Health Imagery and Work Orders! You can also View Trimble Ag's May On-Demand Webinar to learn more about how Crop Health Imagery Works and how it can be a fit for your farm!
